

2020—A Year That Will Be Remembered

Howard Bauchner, MD

2020 may be a transformative year of the 21st century. Like 1776, 1865, 1941, 1963, 1968, and 2001, it is a year that will be written about, taught in school, and become part of the collective memory of the people who lived through it. A pandemic, massive unemployment, unmeasurable morbidity yet to be realized, 55 million children out

 **Viewpoint**

of school, mayors and governors making major health care decisions, and nationwide protests focused on the unrelenting and unremitting pain of racism have already occurred. 2020 has the potential to be a transformative year, one leading to fundamental change in the fabric of society—only time will tell.^{1,2}

JAMA is committed “To promote the science and art of medicine and the betterment of the public health.” That mission statement is meant to imply that journal content should include science and opinion of issues affecting human health. Translational research, clinical trials, observational cohort studies, and clinical reviews, as well as narrative medicine, the arts and sciences, and opinion fill the pages of *JAMA* every week.

The Viewpoints by Metzl et al³ and by Dowling and Kelly⁴ were written prior to the nationwide protests following the death of George Floyd. The Viewpoints by Berwick⁵ and by Galea and Abdalla⁶ were written afterward. But all 4 have a common theme: they reflect the tumultuous events of 2020 that have occurred thus far and suggest that the traditional lane of medicine must be much wider if indeed medicine, as Berwick emphasizes, embraces a broader sense of itself. “Healers are called to heal. When the fabric of communities upon which health depends is torn, then healers are called to mend it.”⁵

The confluence of events and their immediate consequences during the first half of 2020 have challenged society, government, and medicine in profound and perhaps unprecedented ways. The effectiveness of responses and the fundamental changes that must be catalyzed by these events will determine whether 2020 will truly be viewed as the transformative year for the health and well-being of the nation.
